

Factory Escape

By Louis Cooper

Game story

The player takes on the role of a small nameless doll in a vast factory. Planned for incineration, and determined to escape their fate, the doll embarks on a perilous journey through challenges and obstacles as they make their way through the factory.

Sparks

Steam

HDRI (Poly Haven)

Fading to show eyes opening and closing

The screenshot displays the Unreal Engine 4 Sequencer interface. On the left, the 'Cine Camera Actor' component is selected, showing its properties: Current Aperture (5.137618), Current Focal Length (35.0), Manual Focus Distance (100000.0), and Transform (Location: X=4581.871582, Y=2232.833008, Z=1118.423462; Rotation: Roll=0.0, Pitch=90.0, Yaw=0.24414). The main area shows a timeline with several tracks: a 'Camera Cuts' track, a 'Fade' track (set to 1.0), a 'BP_Conveyer' track (disabled), a 'Cine Camera Actor' track (active), and a 'Package' track (disabled). A 'Cine Camera Actor' preview window at the top shows a first-person view of a character in a wooden environment. Annotations include a vertical white line at the start of the sequence, an orange arrow pointing to a red dot on the Fade track, another orange arrow pointing to a red dot on the Package track, and a third orange arrow pointing to a diamond marker on the Package track.

Package is hidden and conveyer is off until needed to prevent any problems

LS_SteamIntro

Bee animation and hidden until required

Conveyor turned on at end to link to gameplay

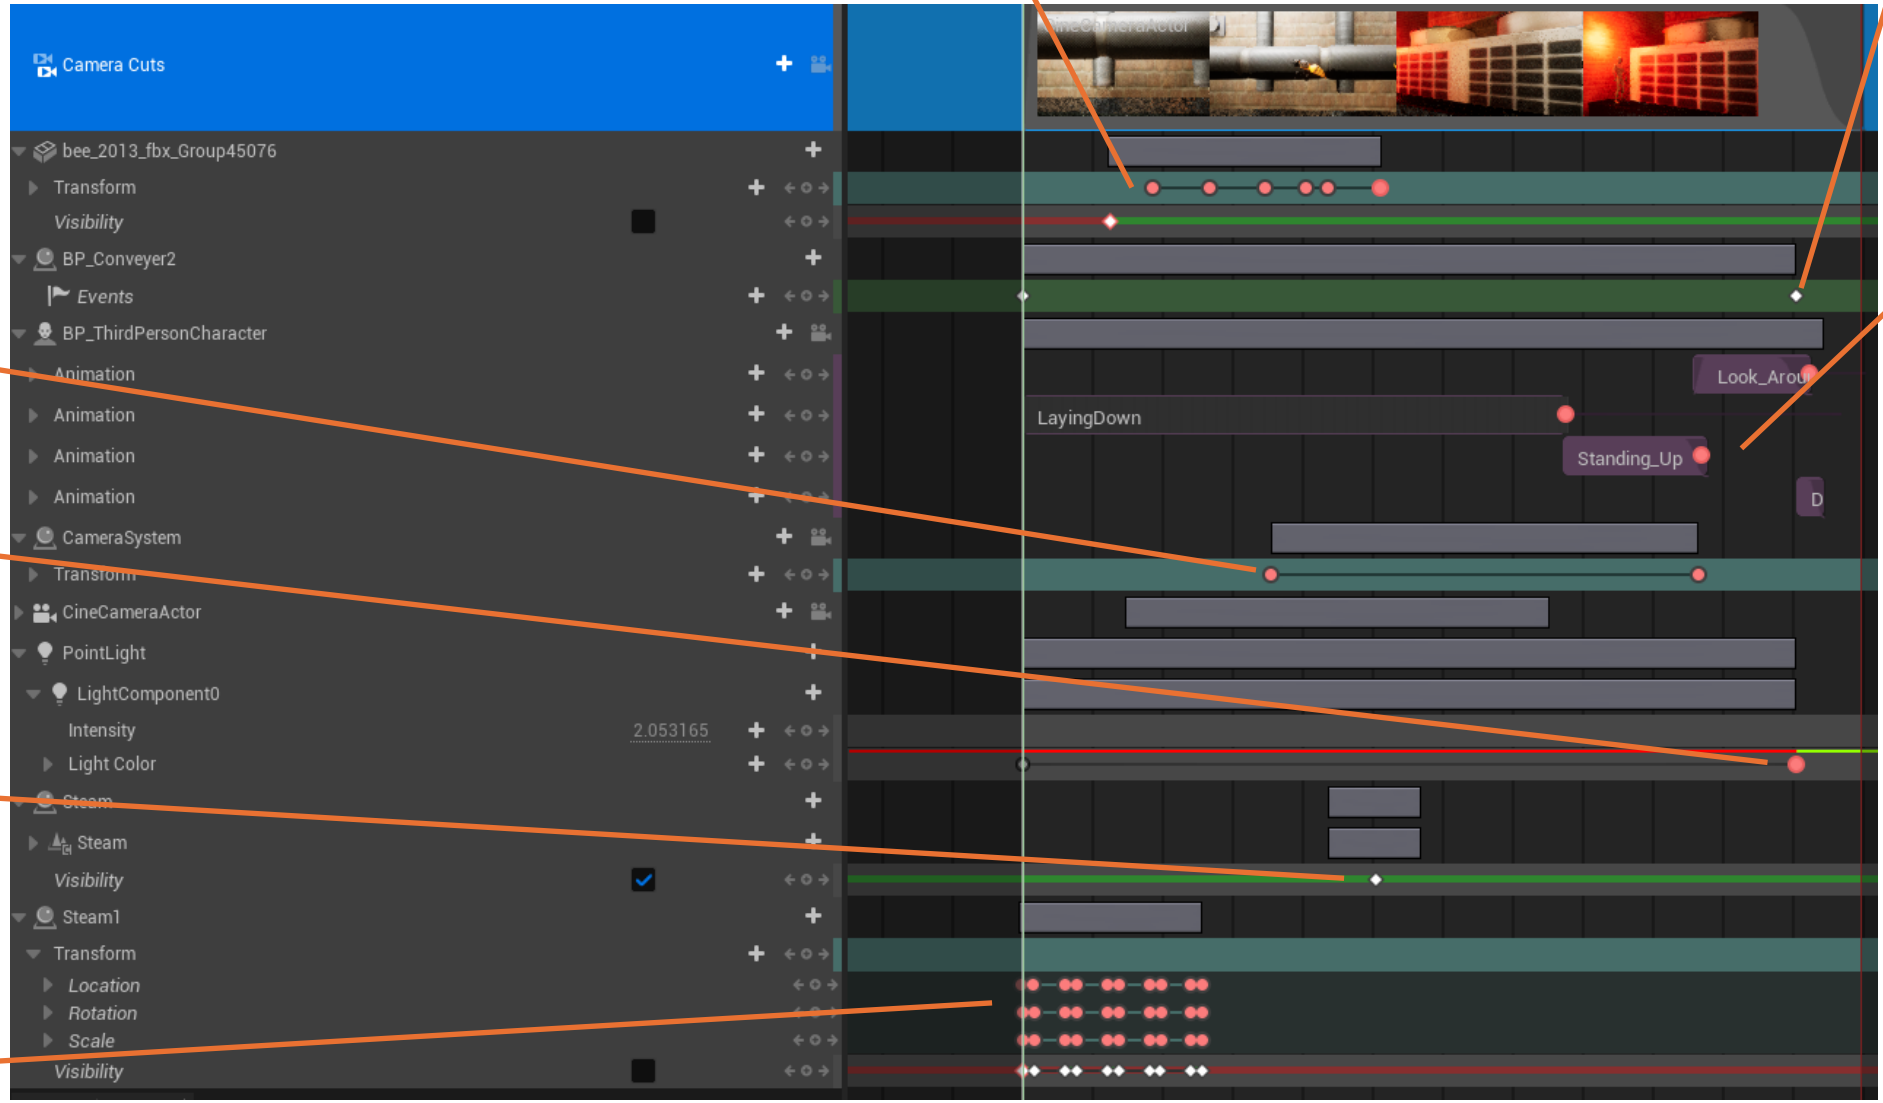

Camera movement

Light animation

Steam trigger

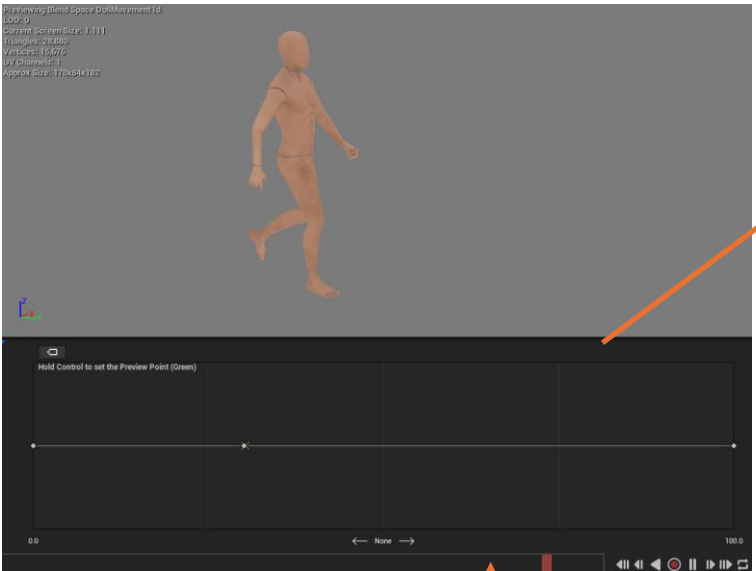

Droplet animation of it falling

Animations of character with use of weights to overwrite anim bp

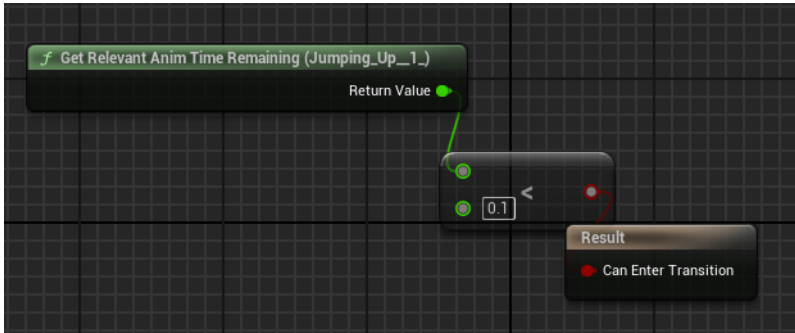

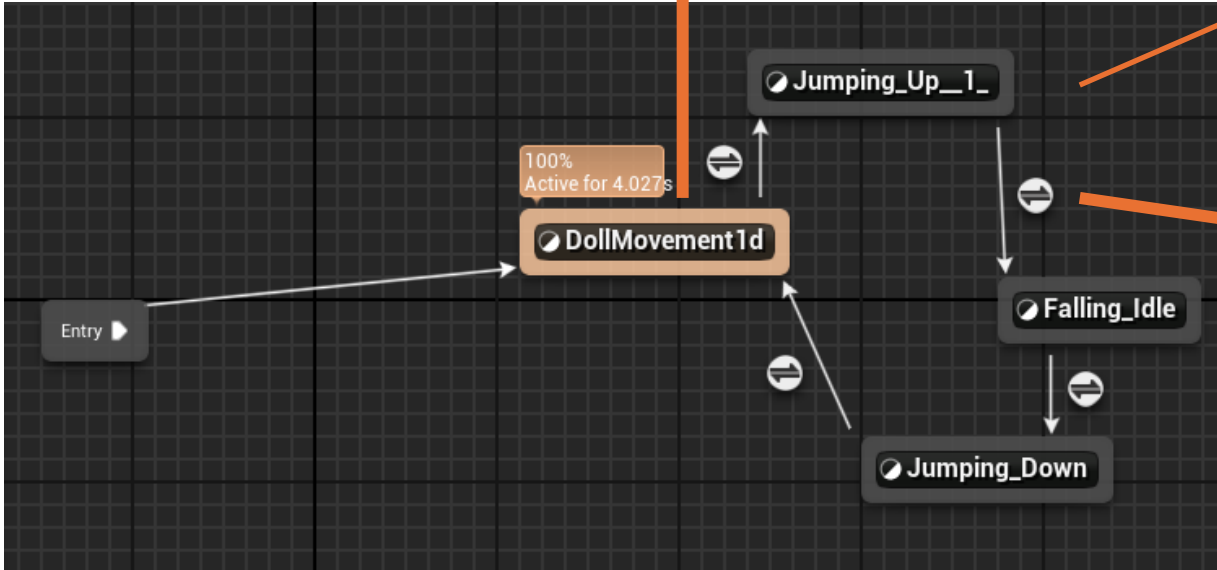

AnimBP

Smooth transition between idle to walking to running based of the speed

Changes animation state based on criteria like this:

LS_Death

Fade to black

Animation of falling back with fade

LS_BossIntro

Light animation

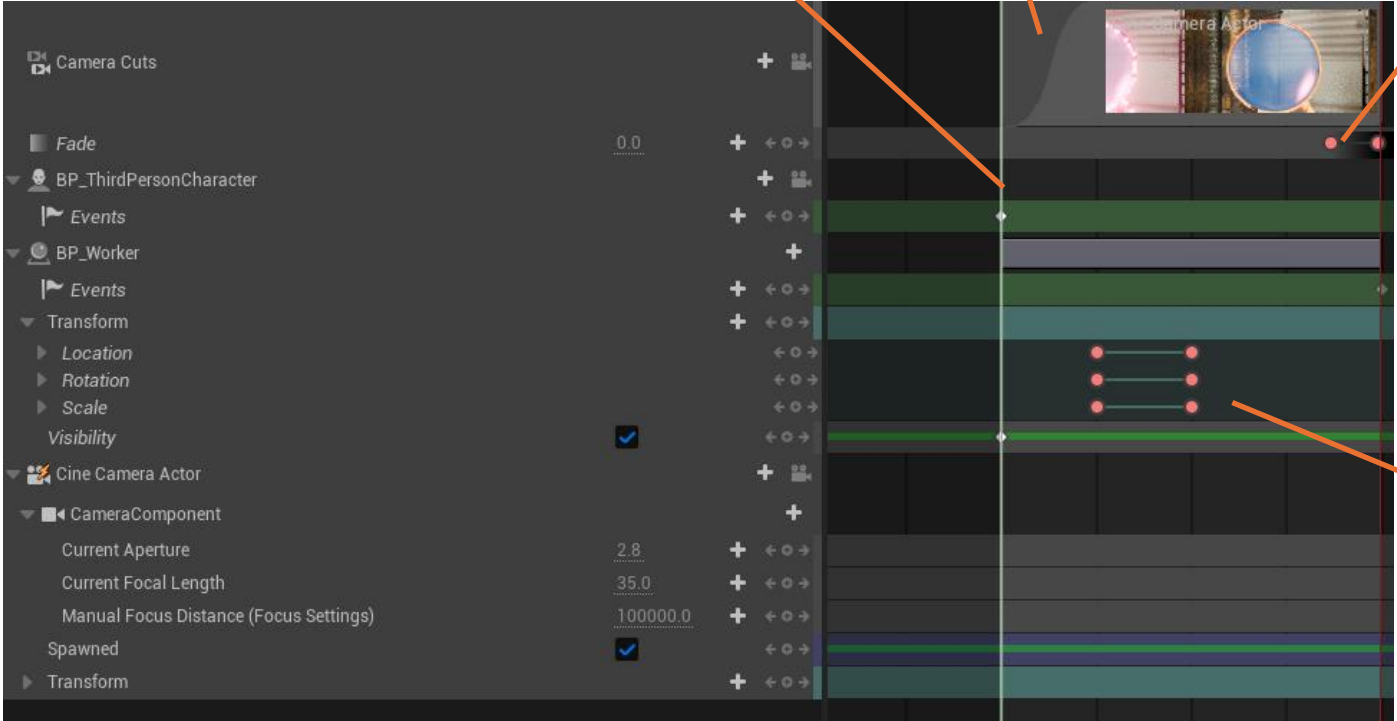

Sets variable that checks if cutscene is done to true

LS_SeenDeath

Sets character variable to Dead

Blend

Fade

Sets worker variable to unseen (to prevent a loop of always thinking is seen and killing character)

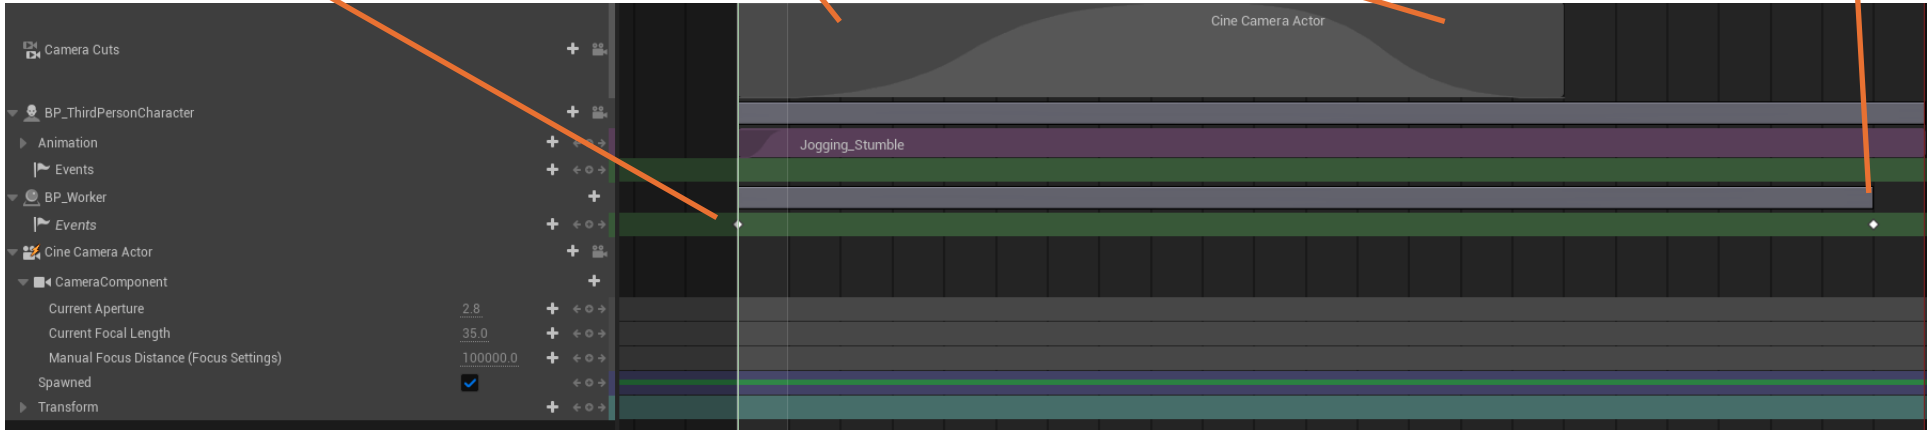

Magnifying glass animation

LS_NearlyFalling

Sets variable that checks if cutscene is done to false

Big blend to make as seamless as possible at that distance

If sequence gets to this point then it triggers seen on worker to kill character

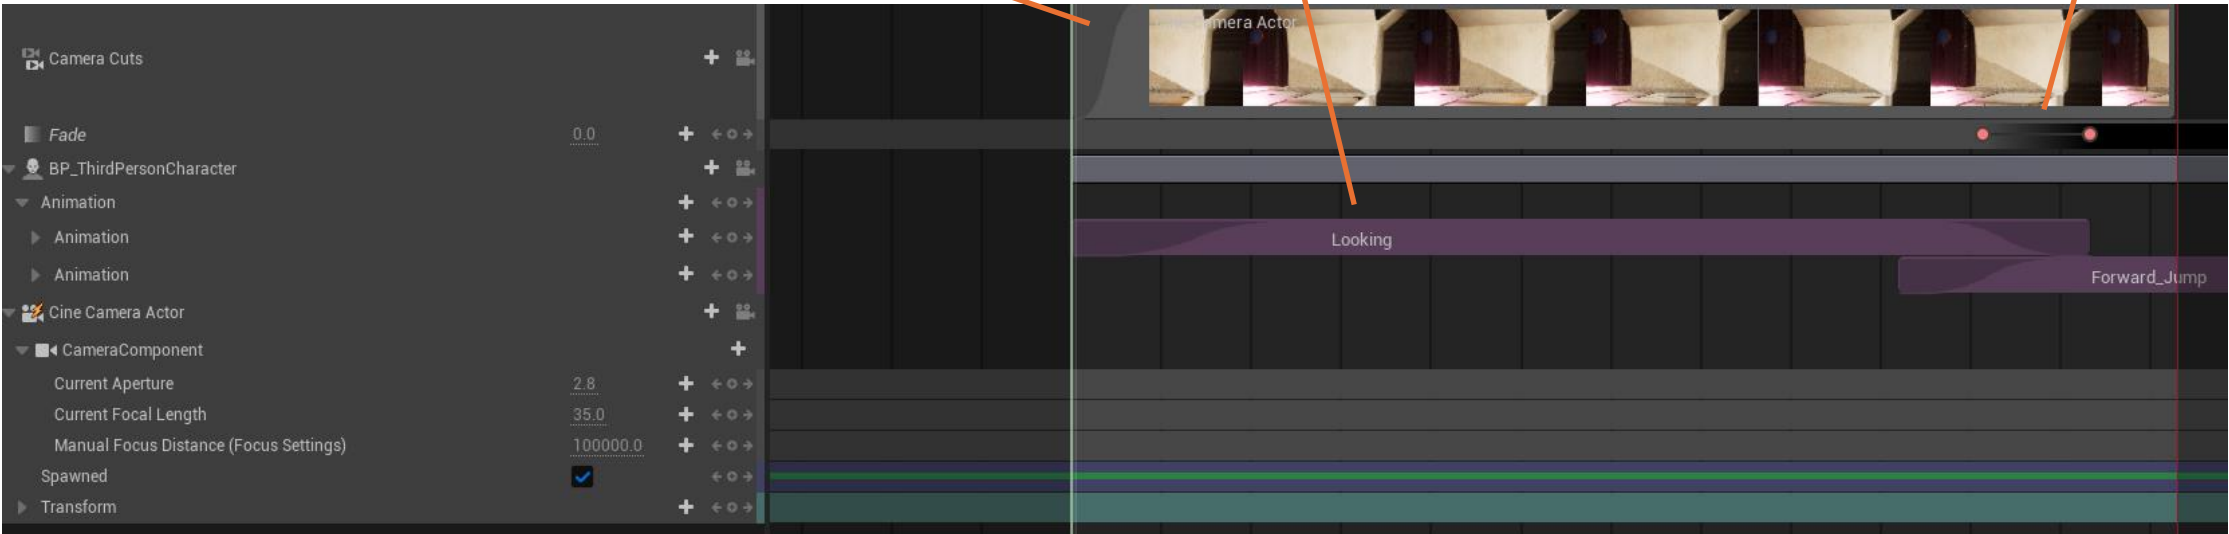

LS_Finale

Blend

Character animation

Fade to black

W_MainMenu

Factory Fugitive

Play

Quit

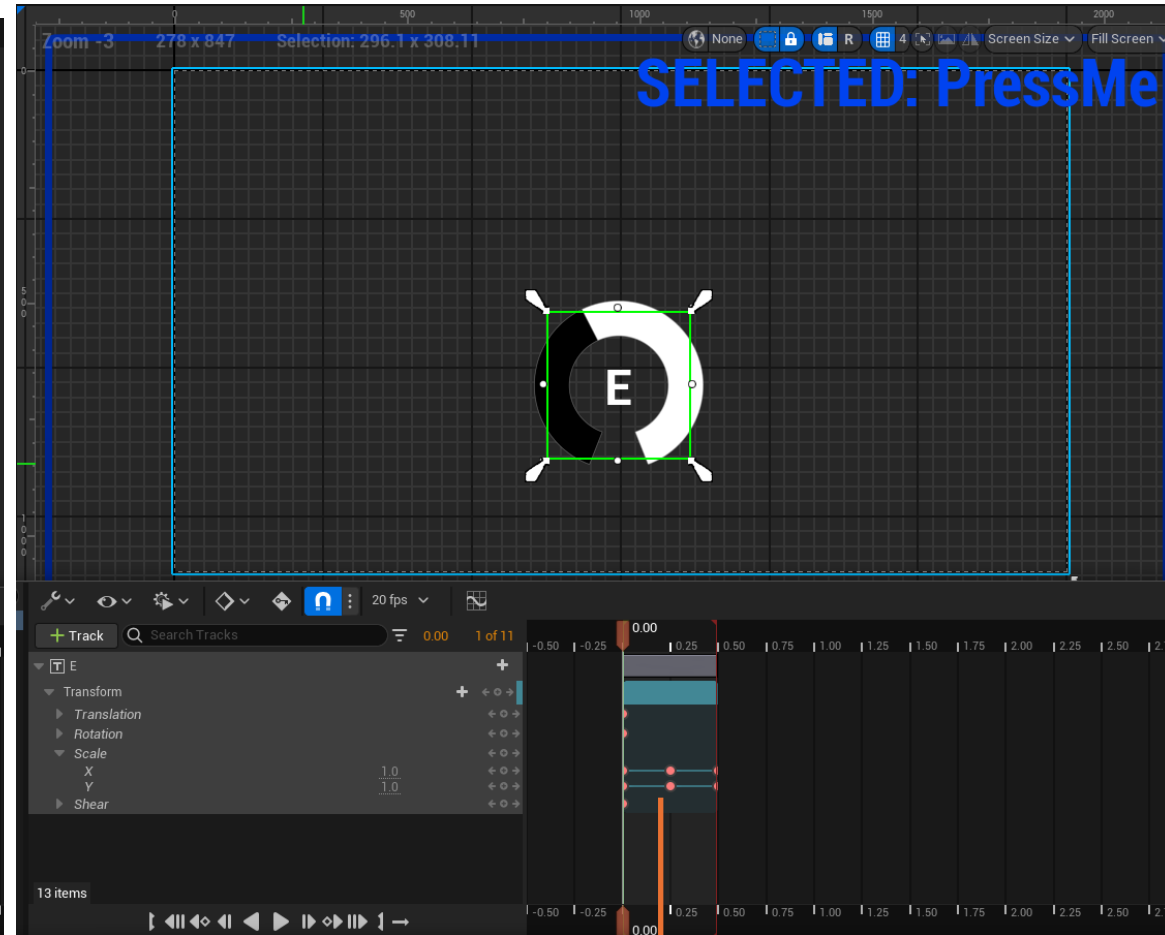

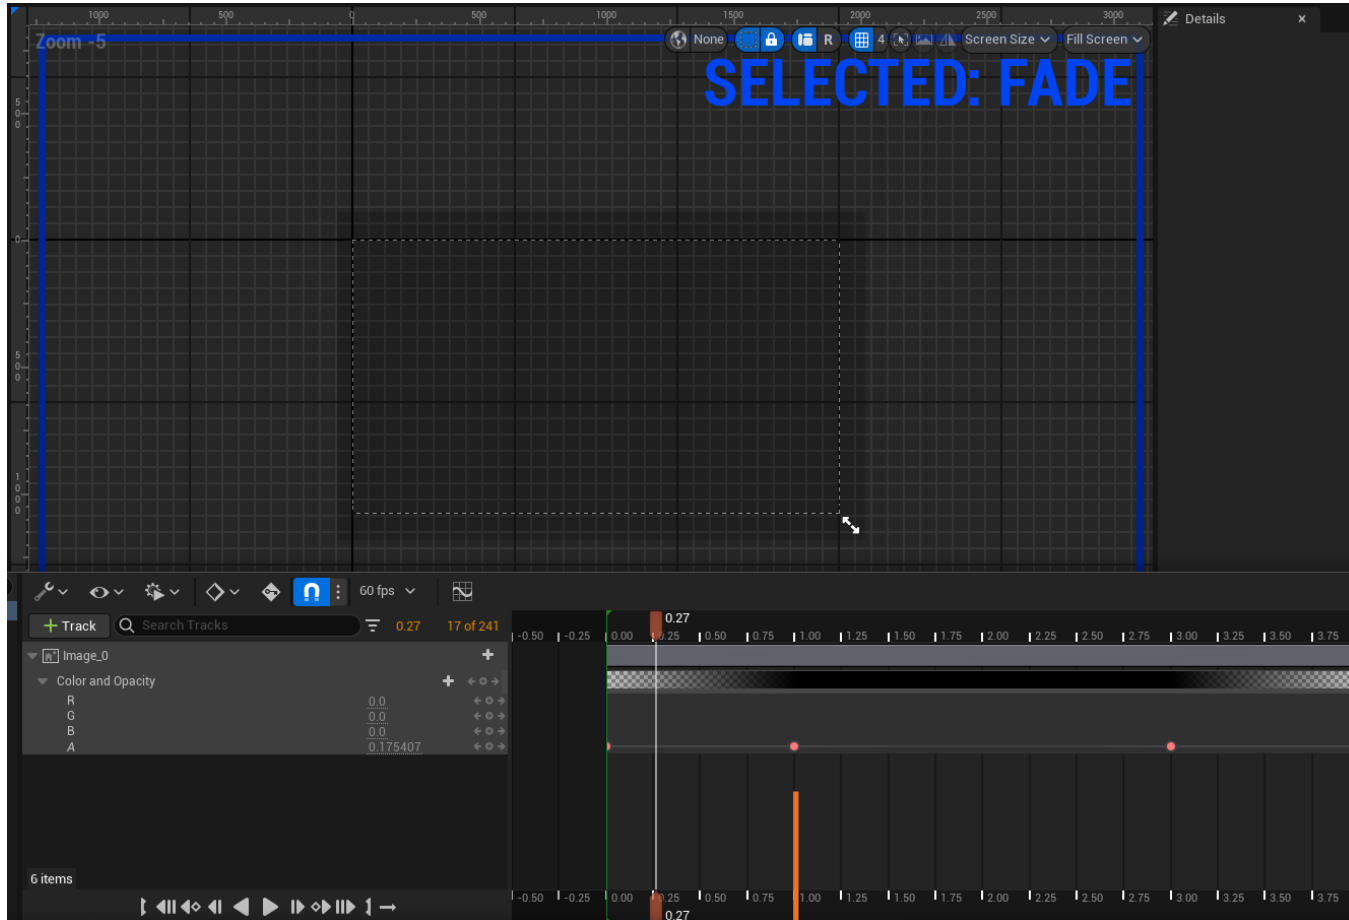

W_DeathScreen

YOU DIED

Load checkpoint

W_FadeToBlack + animation

W_SpamE + animation

Changes opacity of black image to make fade to black

Scales text to look like breathing effect

BP_PressButtonRepeatedly

When overlapped, enable input and show widget

On overlap, create widget and add to viewport

Bound to E

If released for 0.2s remove one press

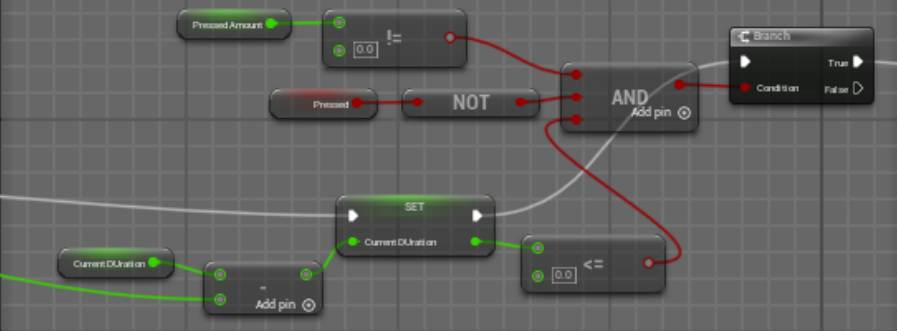

If released for 0.2 seconds, remove one

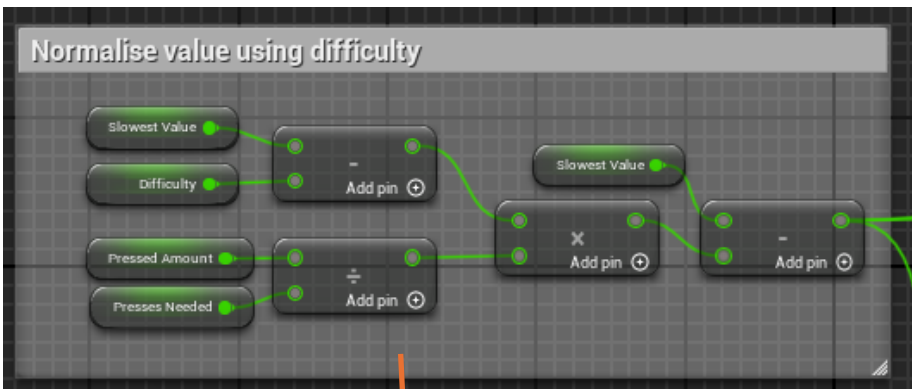

Negative error check

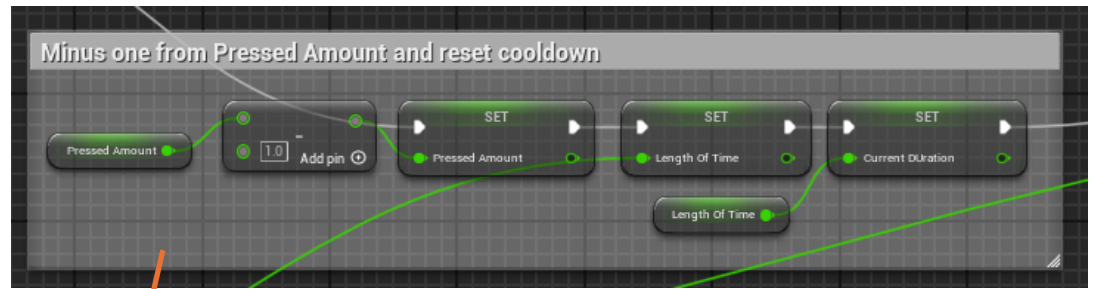

If Pressed Amount is 0, and thus would result in a negative when Pressed Amount -1 OR
If button is still pressed OR
Current Duration is more than zero, and thus hasn't had the full cooldown
Then don't continue. If all are true then criteria is correct

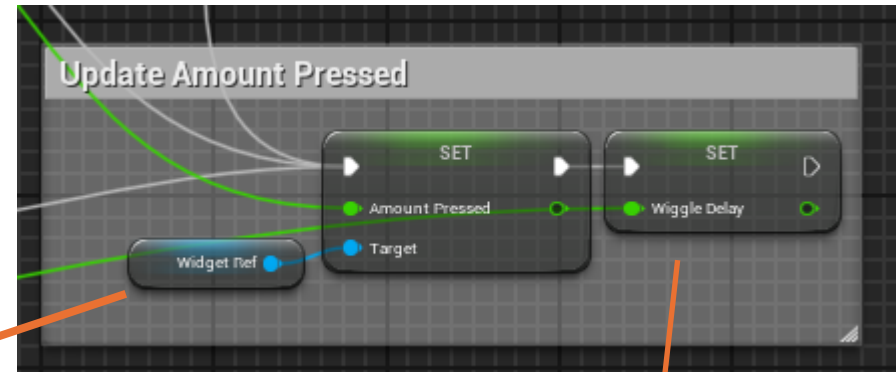

Error prevention checks

Added to initial removal of one, another delay is worked out using amount pressed, speed to decrease the clicks (difficulty) and slowest value wanted (slowest they'll be removed)

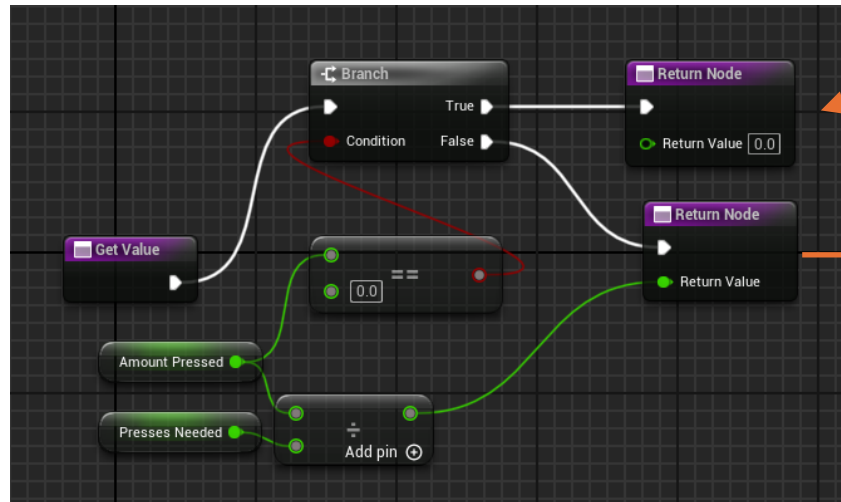

Remove one after this delay and set new delay

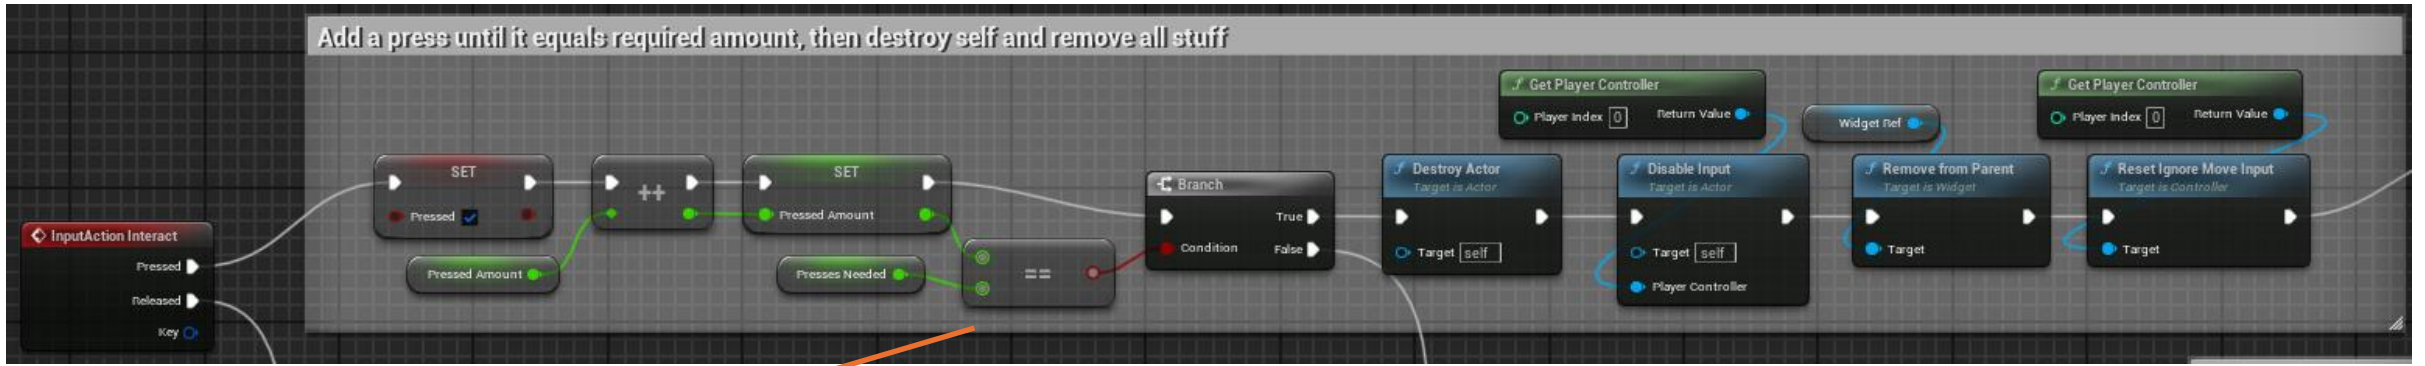

Update widget and wiggle (more on next slide)

W_SpamE function

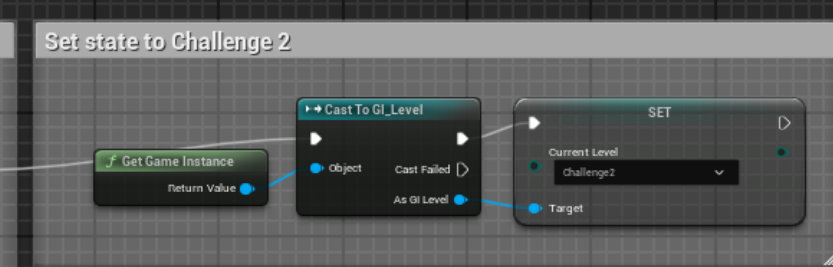

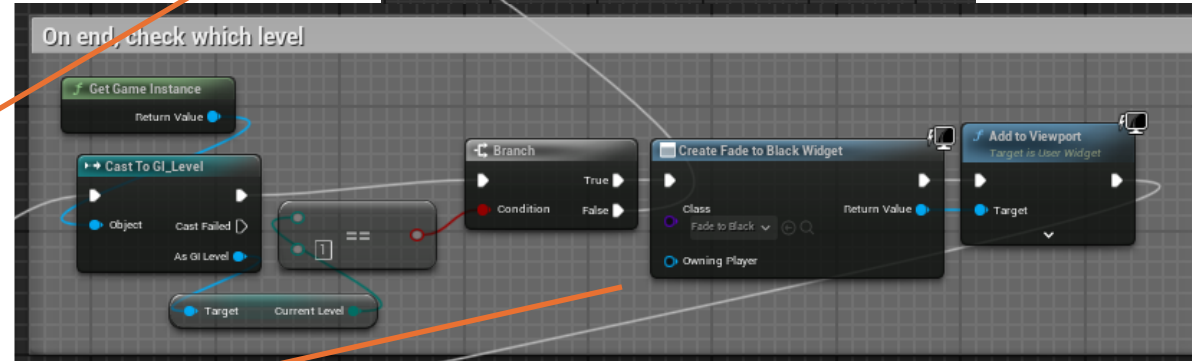

Work out percentage and display on radial slider in widget

If equal to amount needed, destroy self and then...

Work out which level and either update BP_Worker variable showing cutscene is done or fade to black and knock player off platform like they wriggled off and change level state

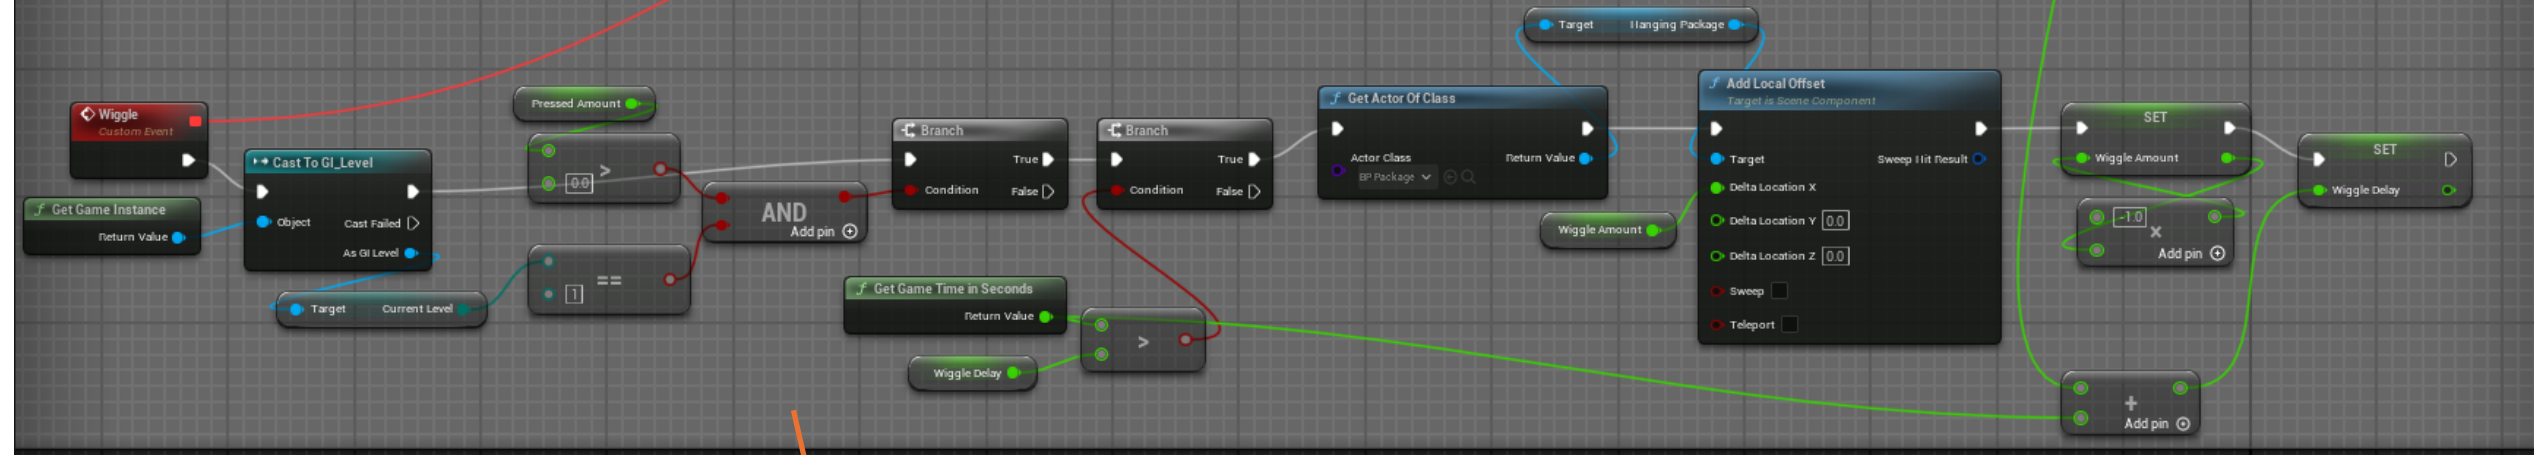

Set values on begin and start loop for wiggle

On start set variables as parsed values

same logic as button pressing, wiggle back and forth assuming it's on the starter level

Same logic as previous slides but adds offset to player so it looks like they're wiggling back and forth

BP_CameraSystem/BP_CameraTriggers

Get all BP_CameraTriggers and sort them into array from 0 to total number

Do the same for spline coordinates on BP_CameraSystem

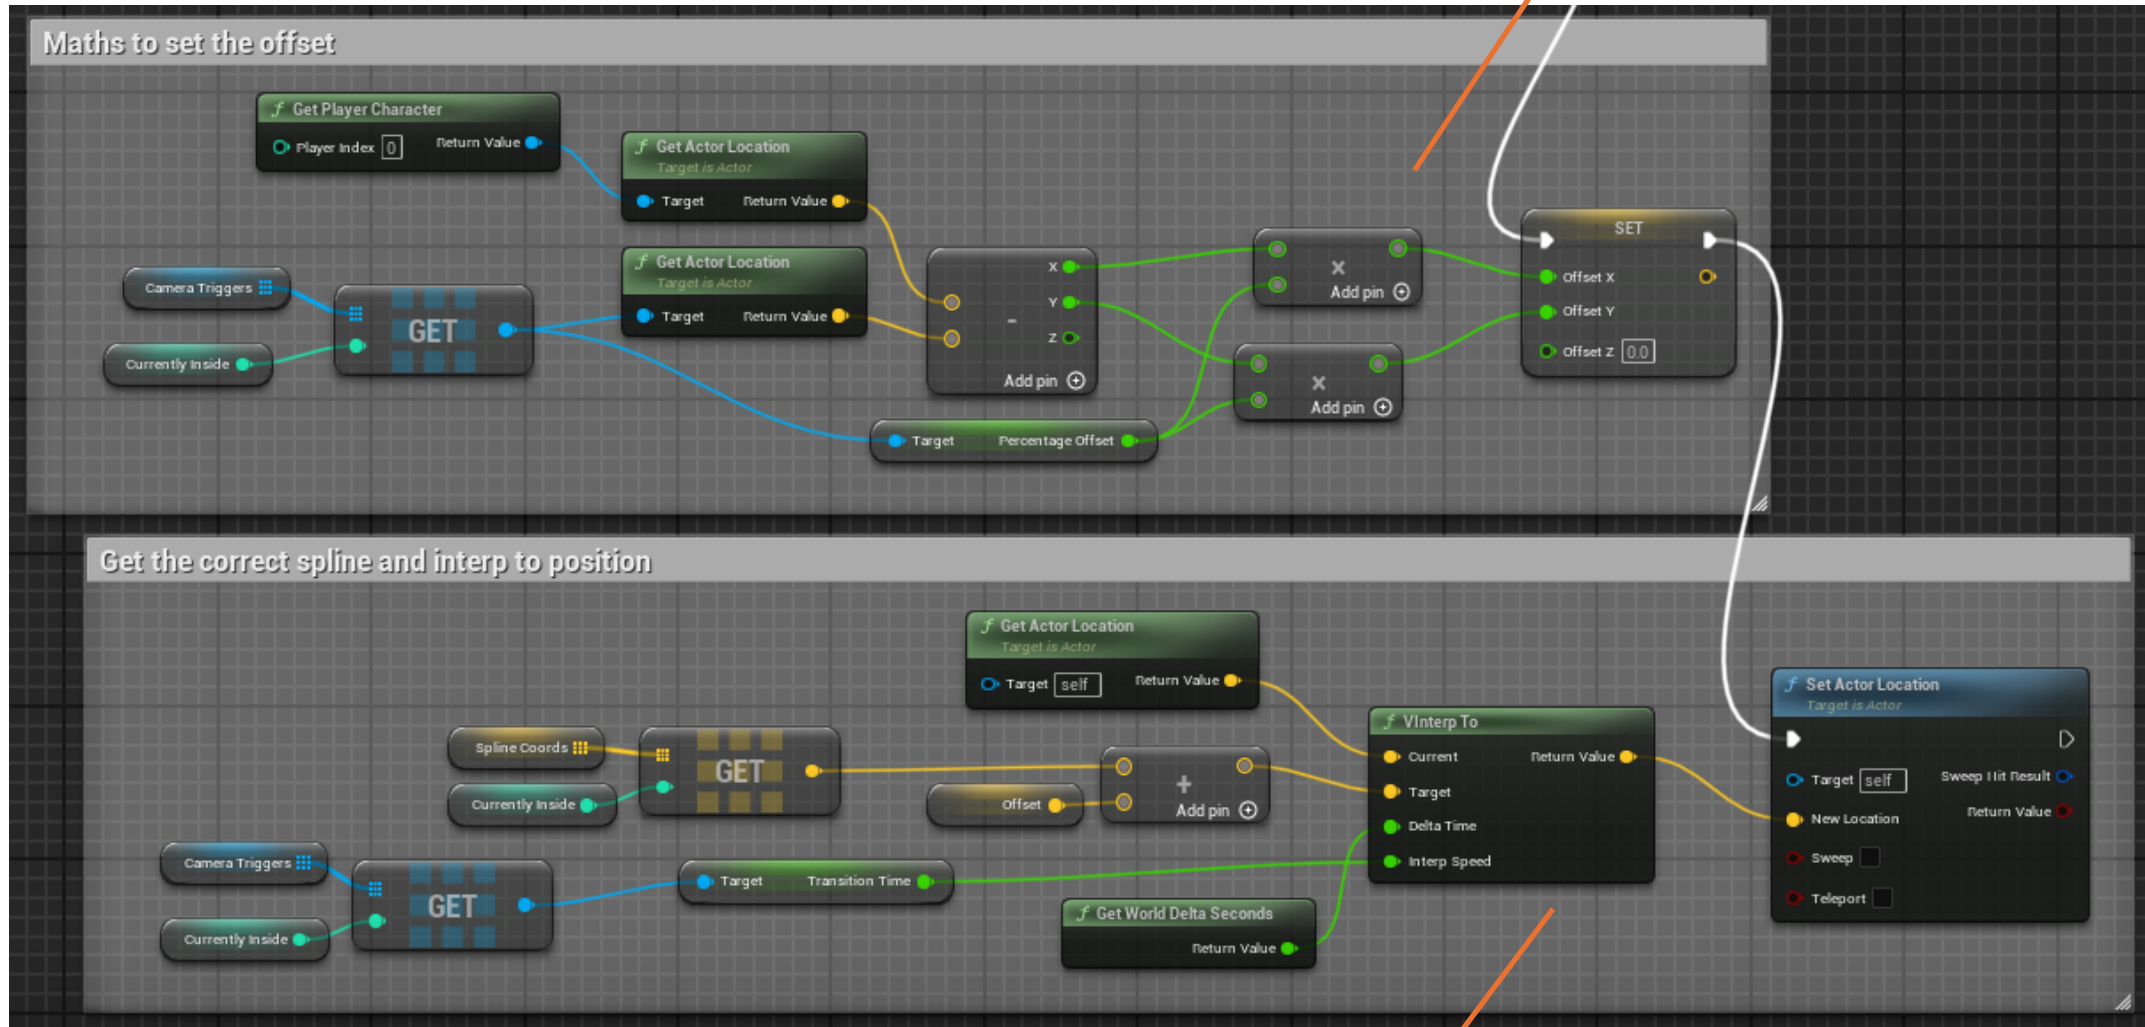

Rotate to always look at player

Find which trigger they're inside of currently through variable on character

Add a soft offset (using Percentage Offset variable) so the camera follows the player more smoothly

Interp to correct coords based on section they're in adding the offset at speed set by Transition Time variable

BP_Death

Set character variable Dead to true

LevelBP – on Death

Stop player moving

Play death animation and reset Dead variable

After 4s (length of death animation) trigger respawning and reset BP_Worker Seen variable to prevent loop

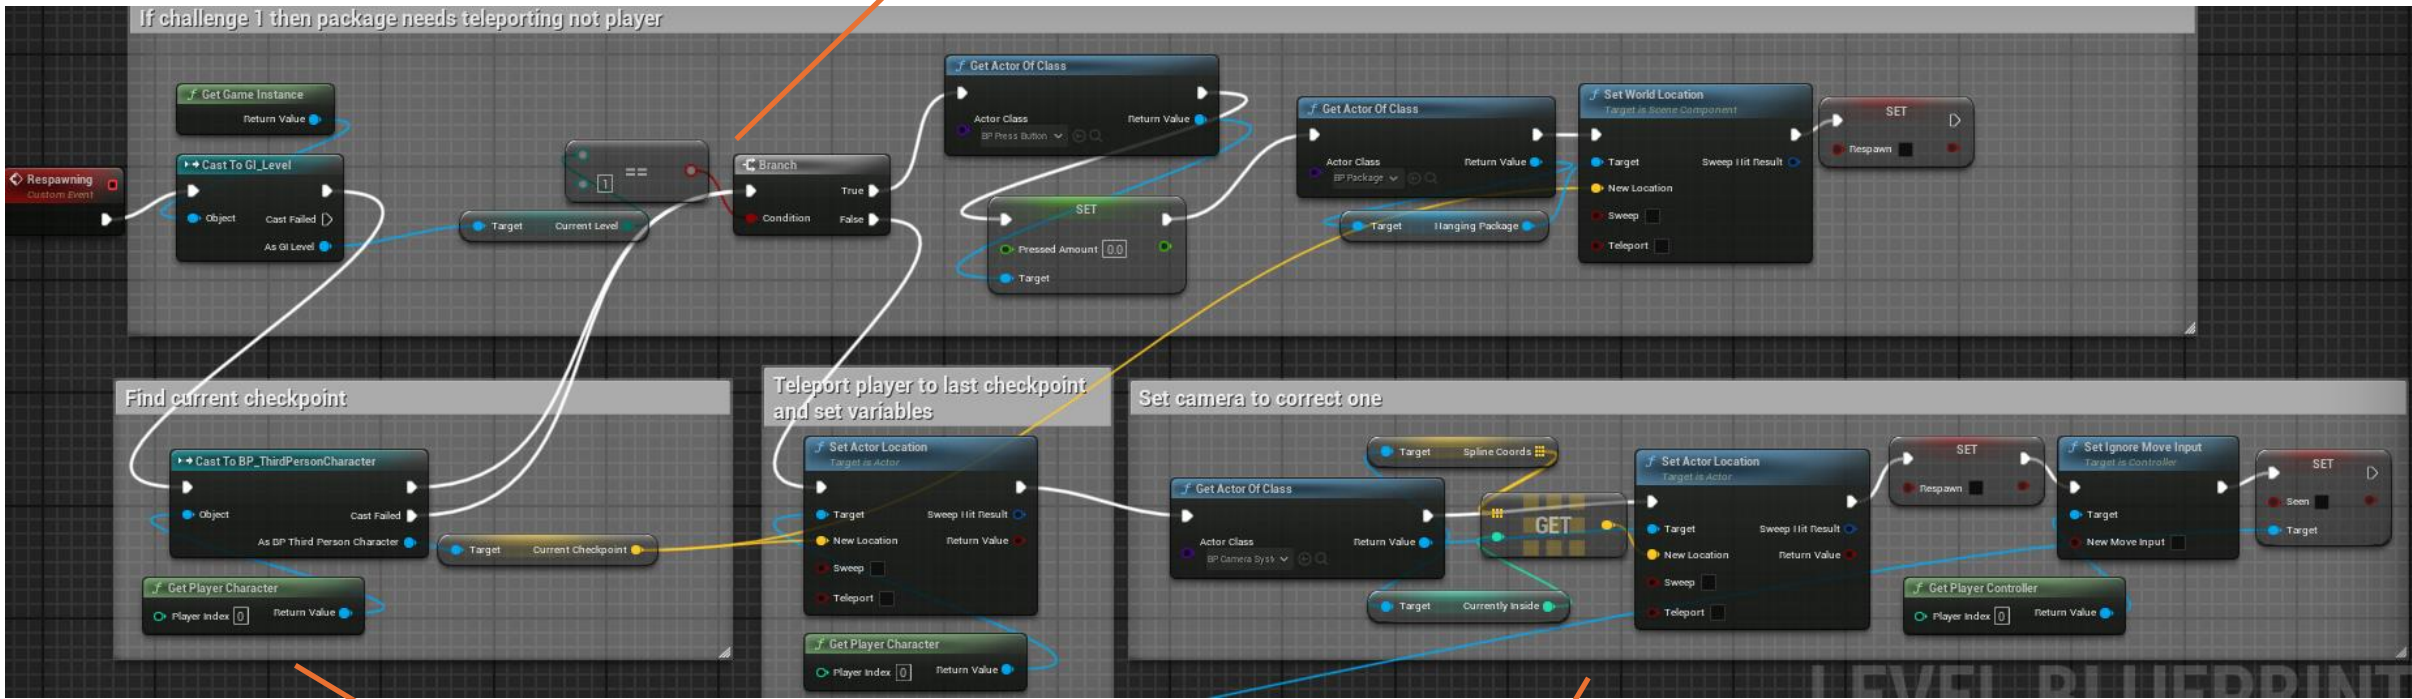

Pause game and show widget etc etc

BP_Checkpoint

Acts as a location for the level blueprint to pickup.

Level BP – respawning event

Check to see if character or package needs resetting

Find current checkpoint and teleport player

Set camera location to ensure it follows correctly

Trace Derived Data 16 Unsaved Revision Control

BP_Worker

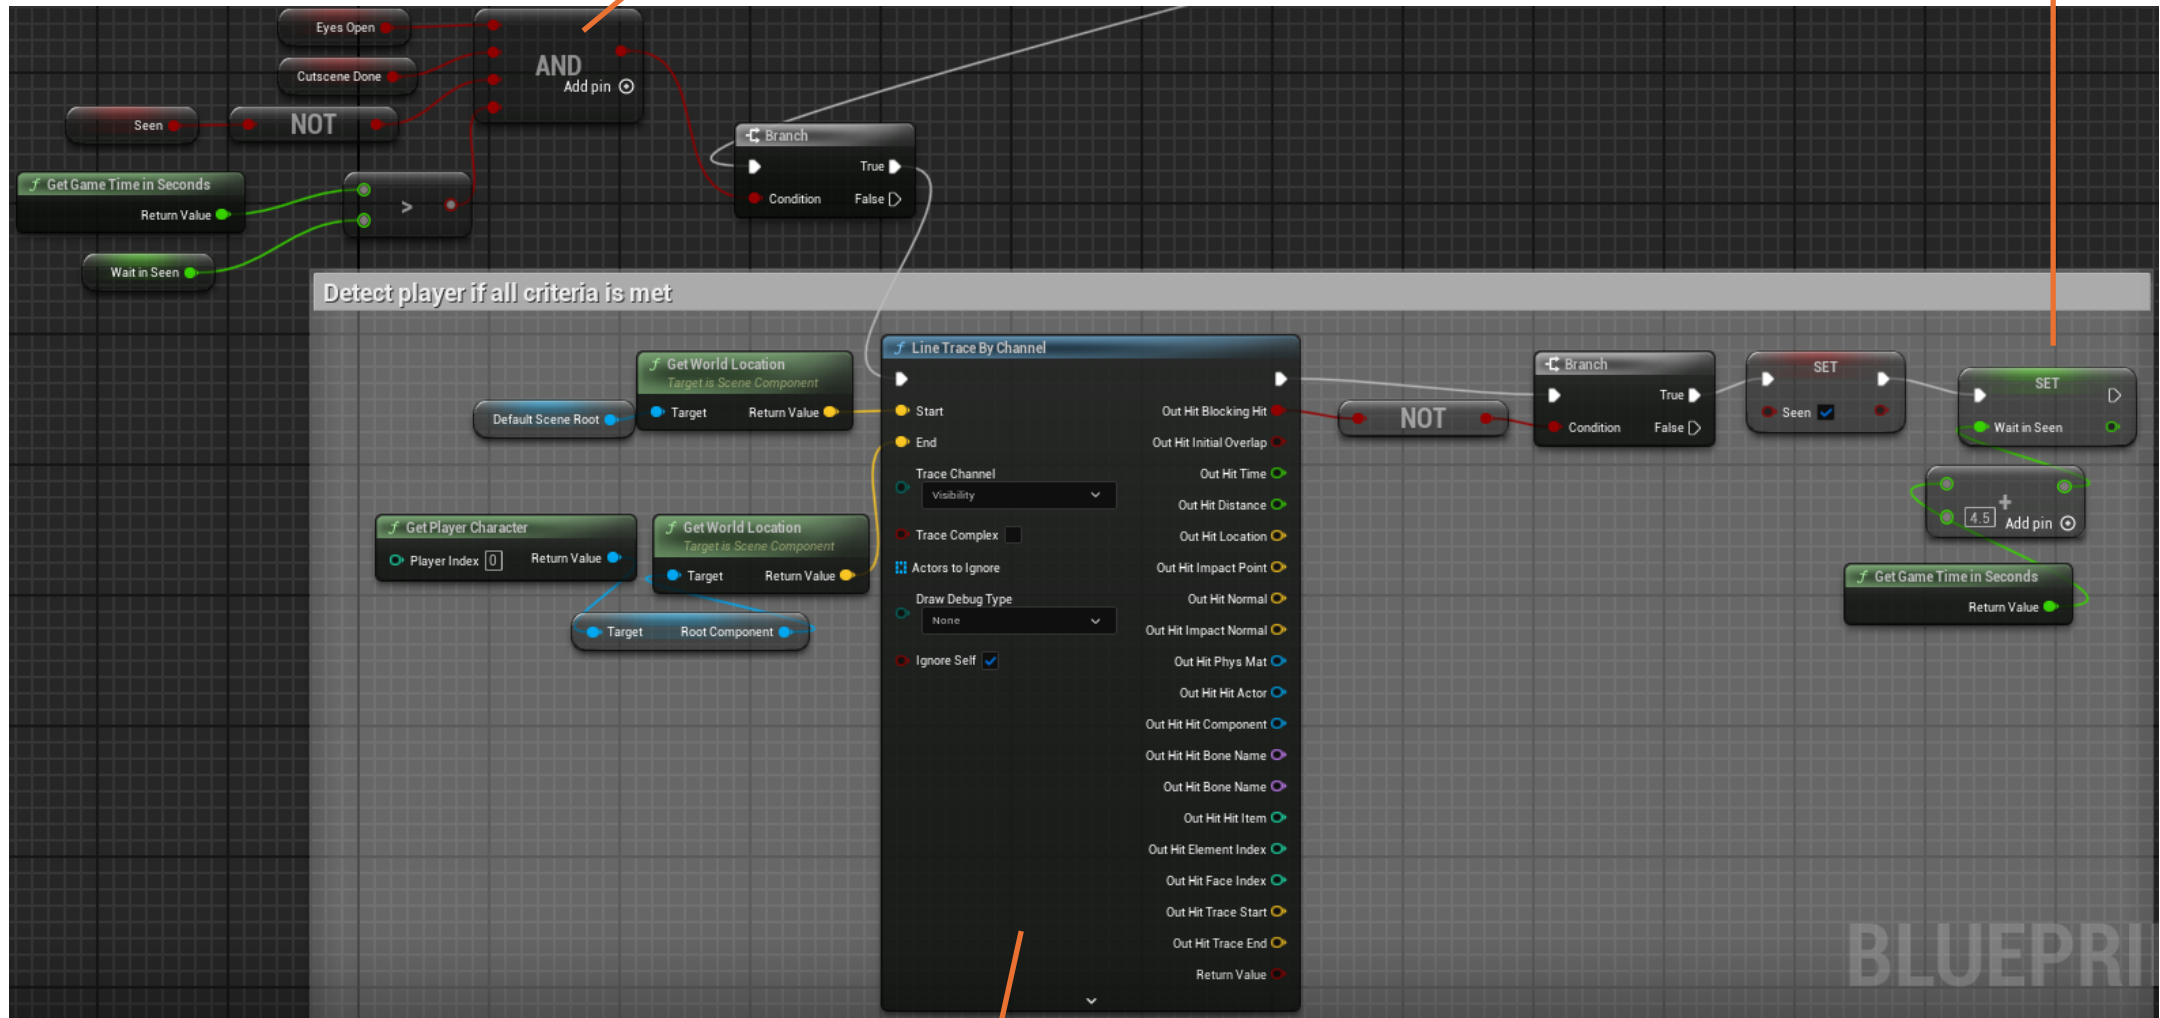

Loop to "open and close eyes" of worker, only triggers once no cutscenes are playing

Set level to Boss when on final BP_CameraTriggers

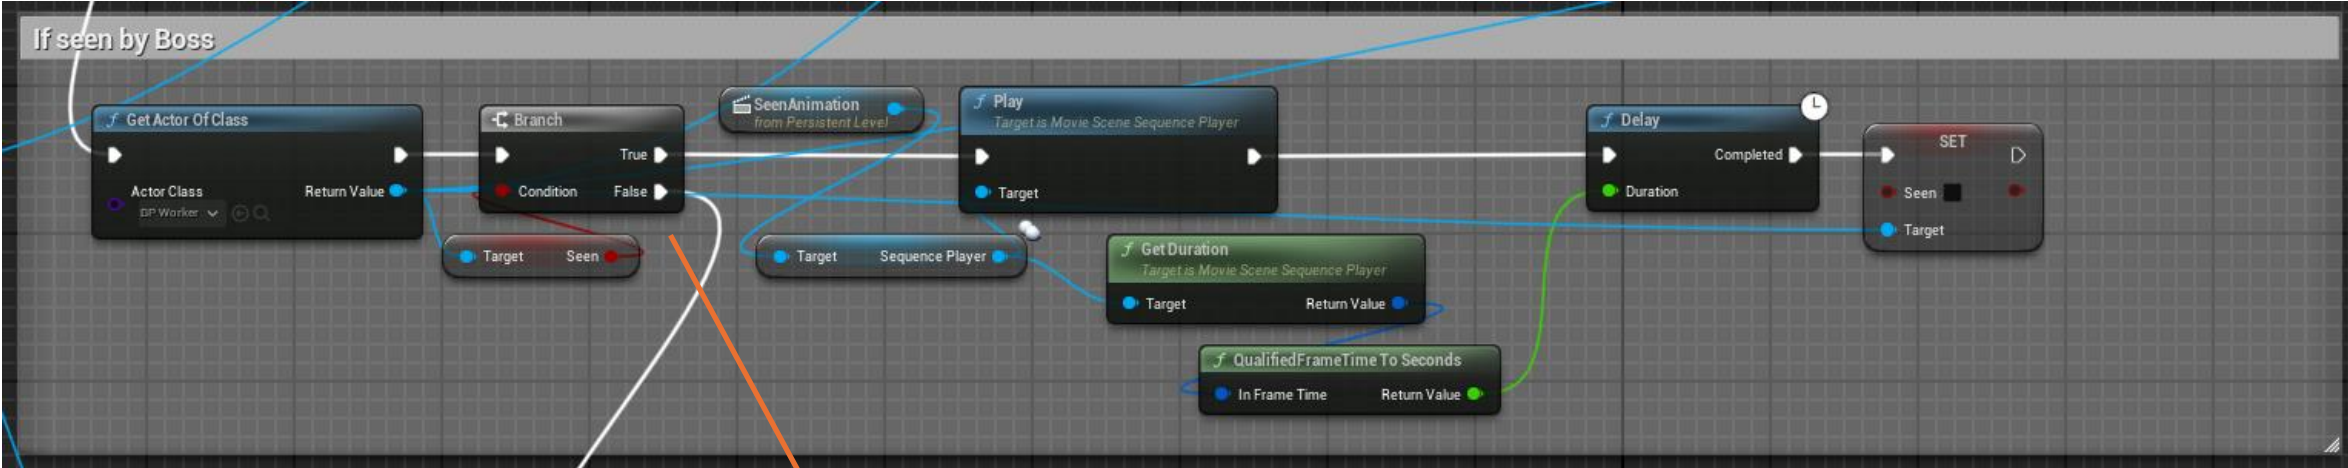

Check to see if ready to detect player, using previous loop and cutscene check as well as delay to prevent loop on death

Set delay

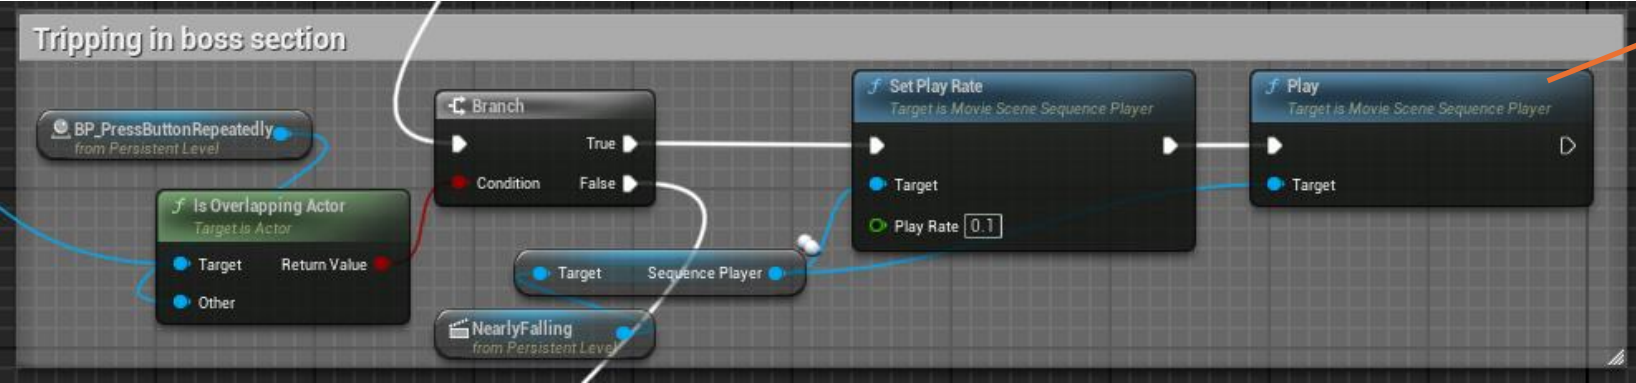

Cast a line trace to see if player is visible, if true set Seen to true

Level BP – Seen by boss

If seen then play LS_SeenDeath and then set Seen to false after sequence is done to prevent loop

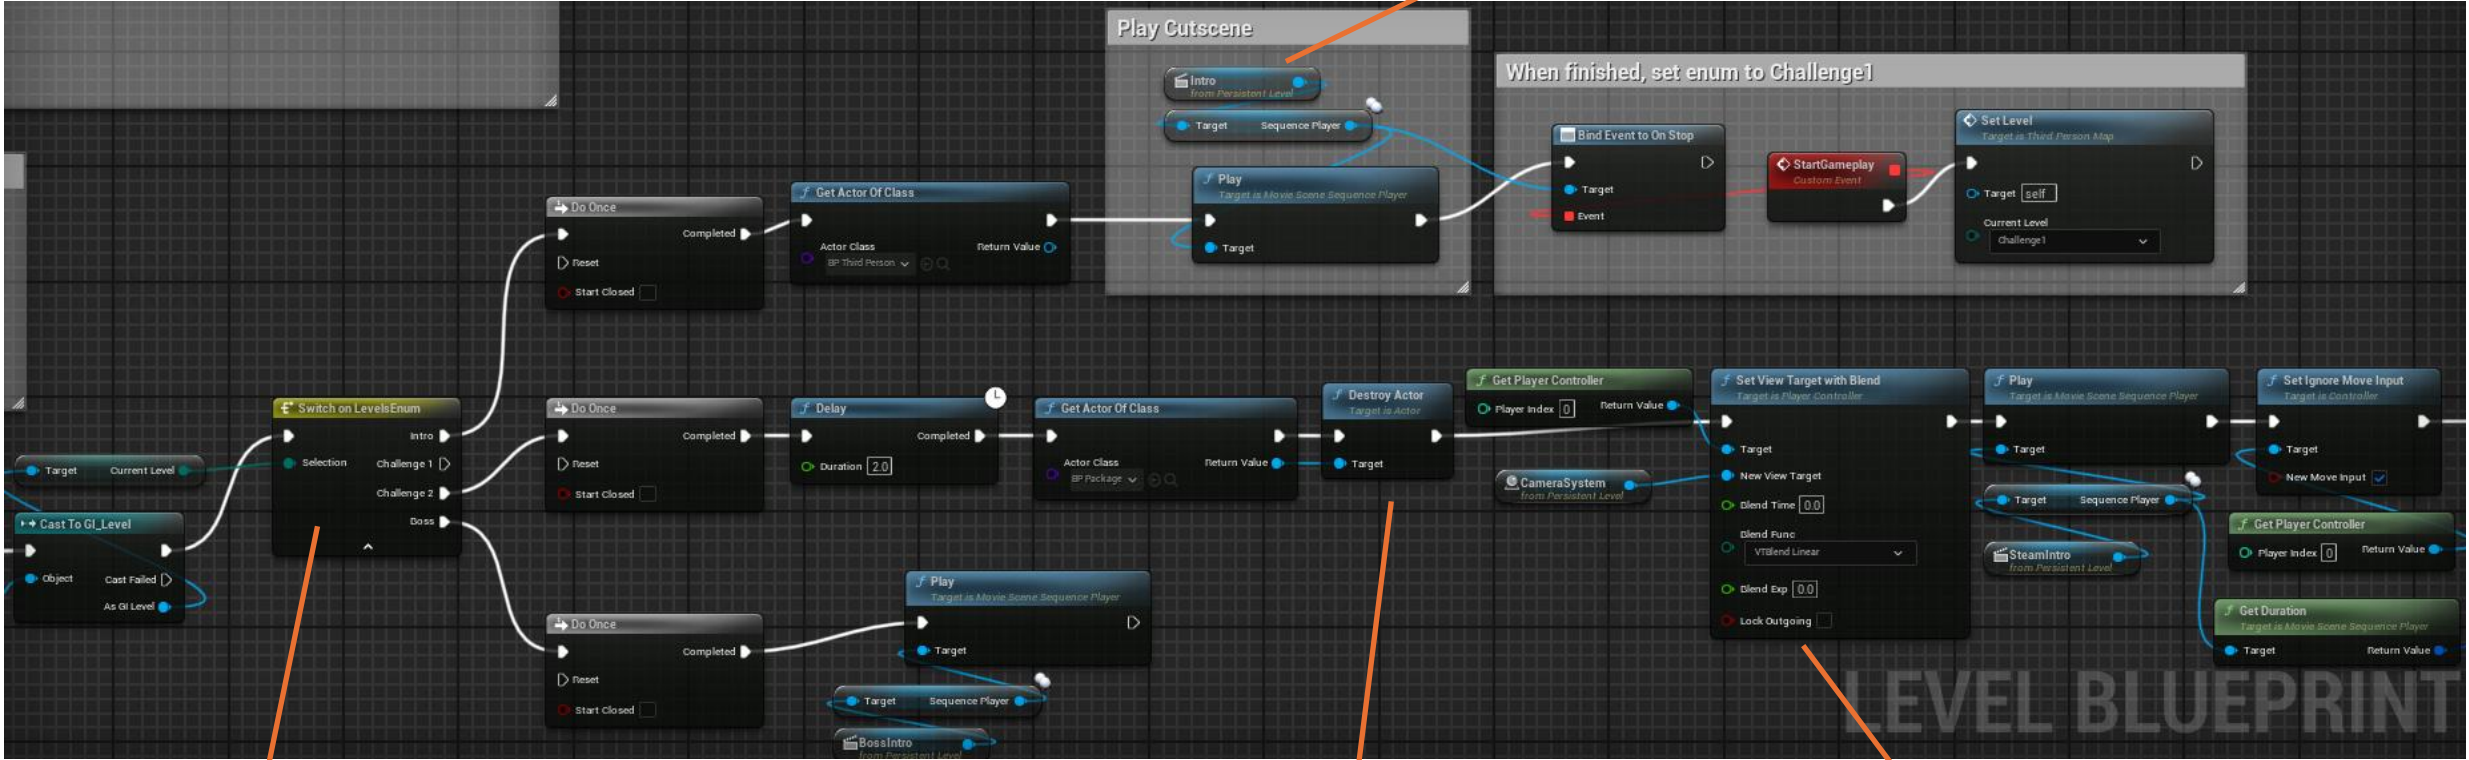

Level BP – Nearly falling

If overlapping the trigger for spamming E at the end, play sequence very slowly like its slowing time. (If they fail to get out of the sequence in time by spamming E, the event trigger within it kills the player)

Level BP – Logic

Play cutscenes and set level to Challenge 1

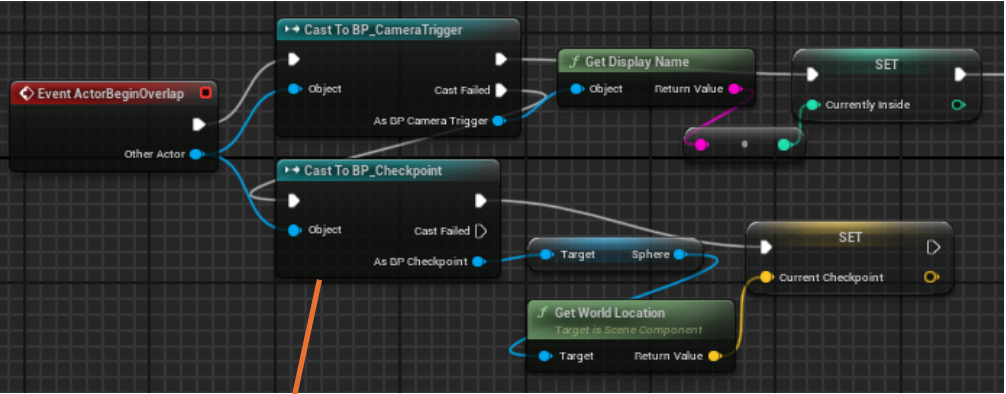

Uses a switch on enum around E_Levels. Easy to organise to do stuff based on each level

Wait 2s for fade to black and then destroy the toy package

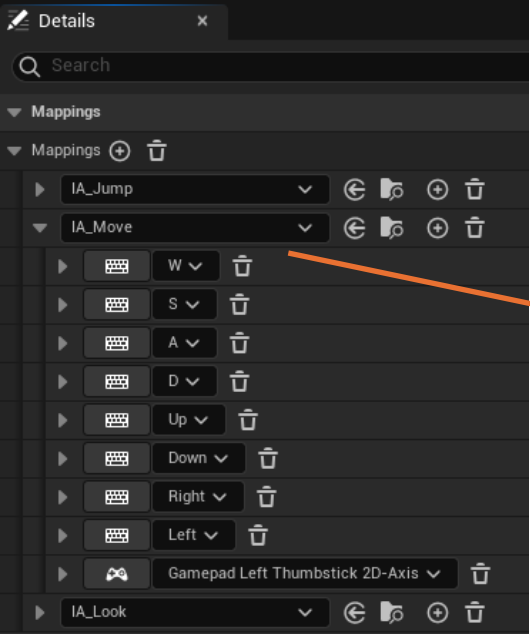

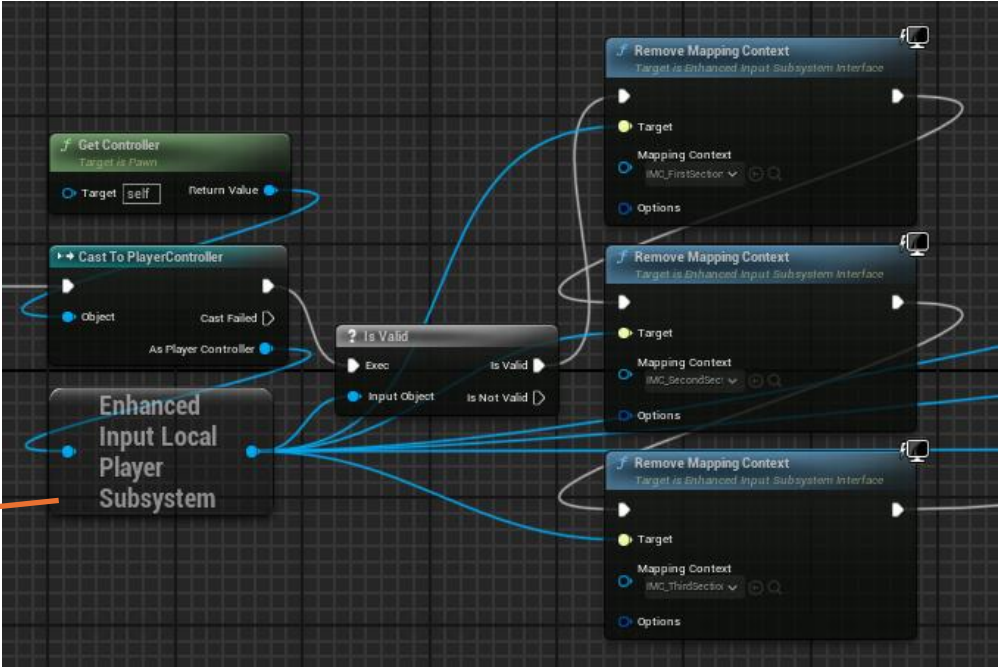

Switch camera and play new cutscene deactivating player movement

BP_ThirdPersonCharacter

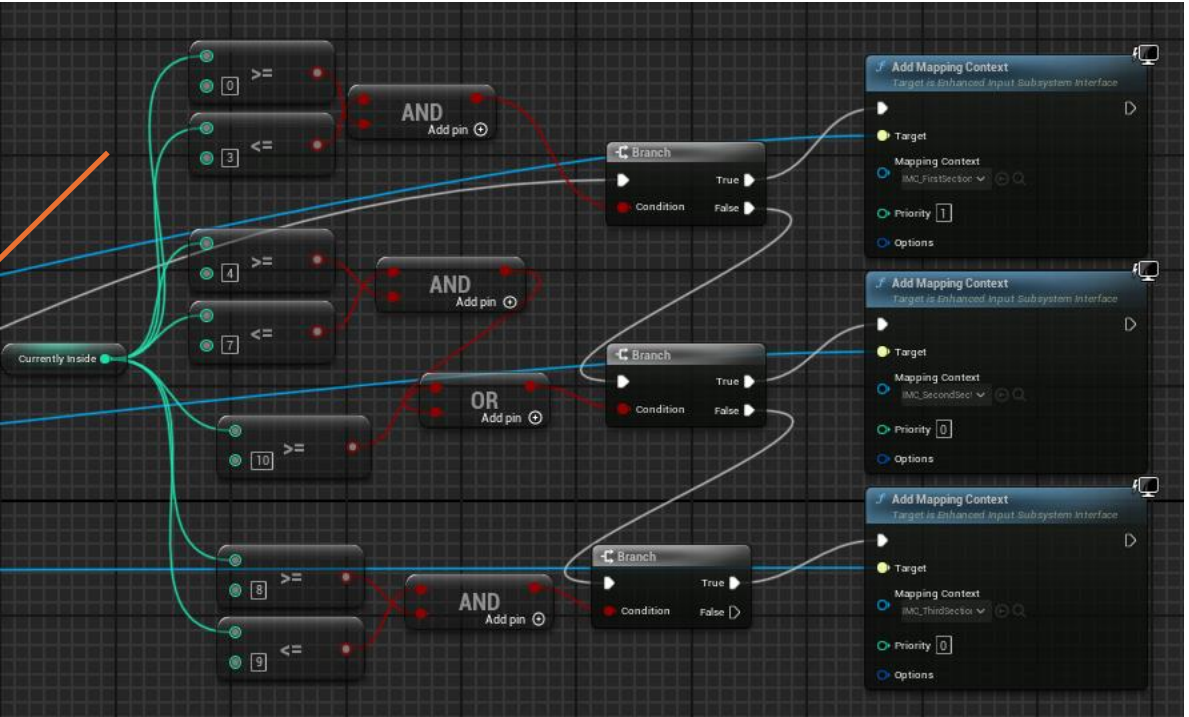

Set up variables on an overlap so other BP are aware of where the player is

Remove all mapping context

Swapping W for A for instance if the camera rotated 90 degrees

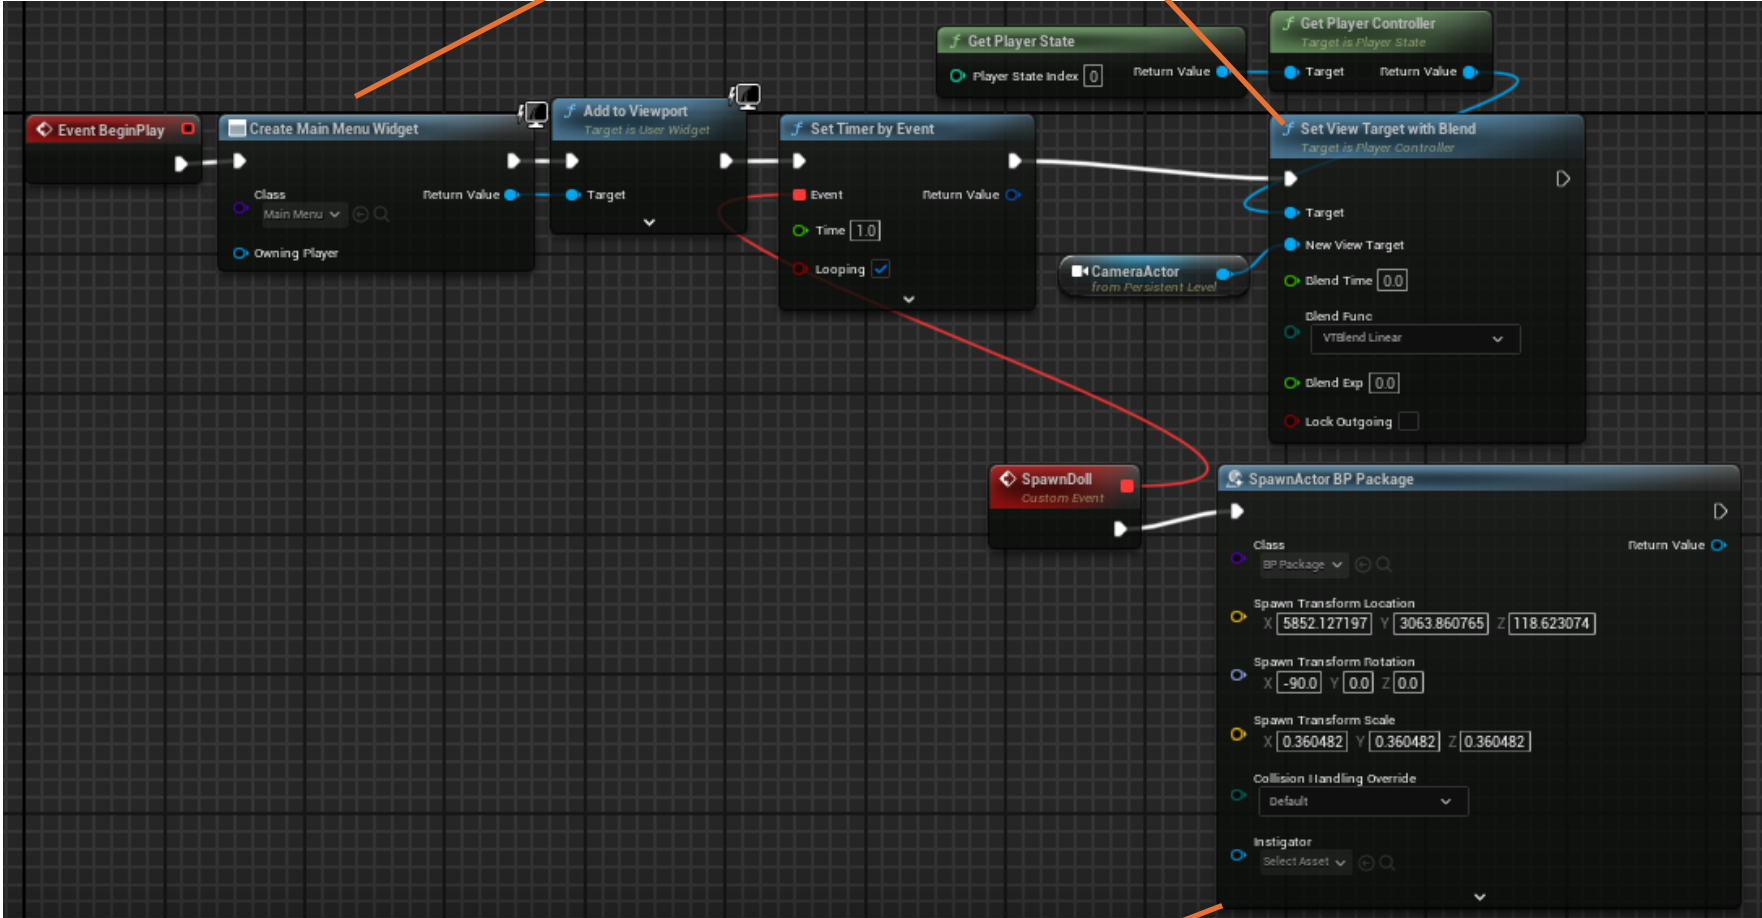

Remap to different version given which section the player is in so that the keys match the orientation of the camera

L_MainMenu

Add widget

Switch camera to correct one

When at the end hit a trigger that destroys them recycling them

Loop spawning toy packages at set coords on conveyor belt
